

## Wildlife & Eco Guidelines

### Did You Know?

YORhub has been working with the Yorkshire Wildlife Trust to...

develop some simple and low cost changes to construction projects that can reduce the impact on wildlife and help to enhance the environmental value of the built environment.

# Installation of Roosting / Nesting Structures

Roosting and nesting structures to be installed in new buildings/ bridges for bats and birds.

Swift boxes and sparrow terraces are preferred to more general bird boxes where possible, in order to provide greater nature conservation benefits.

For high rise city centre buildings enhancements could be installed for peregrine falcons.

Nesting structures are to be installed into the brickwork of buildings/bridges to ensure their long term installation at the site.

More information can be found here:
