

Wildlife & Eco Guidelines

Did You Know?

YORhub has been working with the Yorkshire Wildlife Trust to...

develop some simple and low cost changes to construction projects that can reduce the impact on wildlife and help to enhance the environmental value of the built environment.

Vegetation Cutting

Any standing deadwood should be left onsite if trees are to be felled / drastically cut back due to disease / safety issues. Reason: provides habitat for invertebrates, birds (woodpeckers / owls) and bats.

All wood / logs from tree works to be left on site in wood pile / habitat piles in order to provide habitat for amphibian and invertebrate species.

Vegetation from scrub removal to be left onsite in piles to provide habitat for species such as grass snake.

Wood or vegetation piles should be placed in discreet locations to avoid vandalism.

An editable version of these requirements that can be incorporated into your contracts can be [downloaded from our website](#)
